

WRITING A DESCRIPTION

First of all, I want to ^{introduce} present myself. My name is Marc Guirao Pascual and I'm seventeen years old now. I was born in Barcelona and I've been living in Sant Pere de Ribes since 1998. I have a very little family, I only have my ^{parents} fathers and my older brother, named Roger but, despite it, we are and will always be a cheerful family.

One of the most important things that you realize when you see me is my awesome height because I'm almost two metres tall. I'm not ~~that~~ thin but not ~~that~~ fat boy, either. I can say I'm quite fit because of my physical activity and that's the reason why I have that strength provided by my big muscles. I have brown straight short hair that, combined with my green eyes makes me a little bit different from the others. I don't have such a big ears or a big nose, I can say they're considered normal. My neck is thick and I have a deep voice because of that. If you look at my arms there are long, almost as long as my legs, and that's the reason of my height as I said before and my high appearance. I have to say that my ^{feet are} feet is too big compared to the others persons feet, because I'm almost to that point where I can't find any type of shoes for me and I have to make an especial order.

I consider myself a very quiet person because I always try to manage that situations we are involved in with calm and staying level headed in a crisis. When I think I won't be able to do something I try to focus on my work and completing it step by step being calmed always. Also, my honesty, loyalty and belief ^{yes} makes me a person in whom you can trust when it's needed. Most of the people come and tell/ask me their problems because they know that I will try to do my best in order to help them provided that my honesty and loyalty as I said before. These things make me feel like an important boy that is capable of helping other persons with their personal problems and

that's one of the reason why I would like to study something related to medicine when I finish this school year.

One of my favourite hobbies is to stay in front of the computer creating videos with special effects that I use for example when I need to prepare a video for my holidays or just for a school work for example, I've recently presented a final project about the sports injuries and I used my knowledge of these kind of programs to prepare a video trying to be more creative than my other classmates and amaze the teachers this way. I think this can help me to improve my English language because most of the programs I use to create this kind of videos, such as Adobe After Effects, Sony Vegas Pro and iMovie for example, have an English interface and almost all of the guides I have to search up information are in English, so it's always a good idea to continue doing this type of things, especially when you see that they help you sometimes. Also this can help me in a future when I need to expose something in front of hundreds of people. I also play sports and that's one of the reason why I practise handball with my friends. My team is composed by fourteen players, two of them are the goalkeepers and two trainers. I've been practising handball since I was five or six years old and it has helped me to realise how important cooperation is between people, especially in jobs or sports that require that high level of concentration.

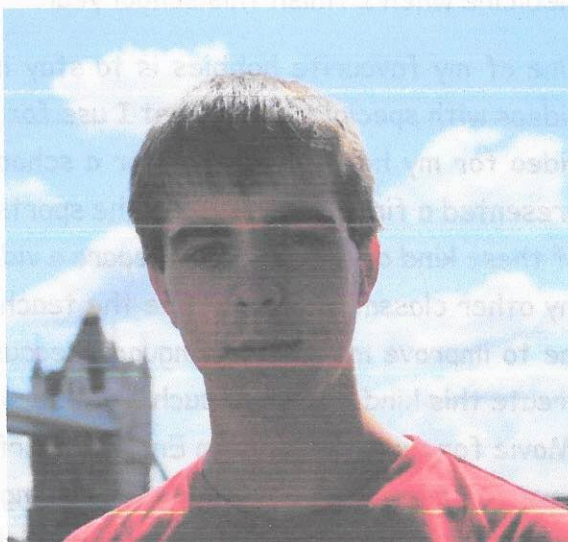

In addition, I would like to say that I work for a company and I'm that person that has to put together the videos I receive and with a little bit of love and magic try to create a fantastic video. This company sells and buys any kind of wearing clothes using a webpage that makes all the work easier. The videos that I made are used to attempt and invite people to collaborate with us and this way they can earn money just by selling that clothes that they don't use that much and are forgotten in the wardrobe. I love doing this kind of stuff and, if I can't enter to the career I want, I would probably go for an informatics one.

Excellent! (9)

- Review mistakes
